Integration Made Easy

Jitterbit delivers powerful, flexible, & easy to use data and application integration solutions.

Designed for the technical business analyst, Jitterbit allows companies of all sizes to integrate any On-Premise, Cloud, Social, or Mobile application.

Jitterbit’s graphical "No-Coding" approach accelerates and simplifies the configuration and management of otherwise complex integration projects. Available in the cloud or on-premise, and backed by enterprise-class support and services, Jitterbit is the most powerful-yet-simple integration solution available.

What Can Jitterbit Do For You?

Application Integration
- Integrate corporate databases and CRM applications
- Update applications with transactional ERP data
- Automate electronic order processes across systems

Cloud-to-Ground Connectivity
- Integrate cloud applications with back-end systems
- Consolidate corporate data to offer as a Web Service
- Integrate product inventory with XML-driven partners

Business Process Automation
- Create end-to-end processes across departments.
- Automate processes such as Quote-to-Cash

Data Migration and Synchronization
- Consolidate disparate data from multiple locations
- Update data across ERP, CRM and custom apps
- Provide analyzable data for regulatory compliance

**Intuitive Integration.** Jitterbit automatically discovers system configurations to help you get started quickly. The user interface allows non-technical users to point and click to define source & target systems, drag and drop to map data transformations, and easily run integration operations on batch, trickle or real-time schedules. A fully featured administration console provides reporting, notifications and detailed user and group permissions.

**Shortcut to Success.** Jitterpaks allow you to import, export, and share every aspect of an integration, including document definitions, data mappings and transformations. Pre-built Jitterpaks for common integration scenarios give you a jumpstart on your project.

### Three Step Integration

1. **Design** your own integration requirements or let Jitterbit automatically discover basic system configurations.
2. **Deploy** your mappings and operations to the high performance run-time integration engine.
3. **Manage** your integrations with the administration console. Track operation queues, view activity logs, and get real-time status alerts.
