

Jitterbit API Manager

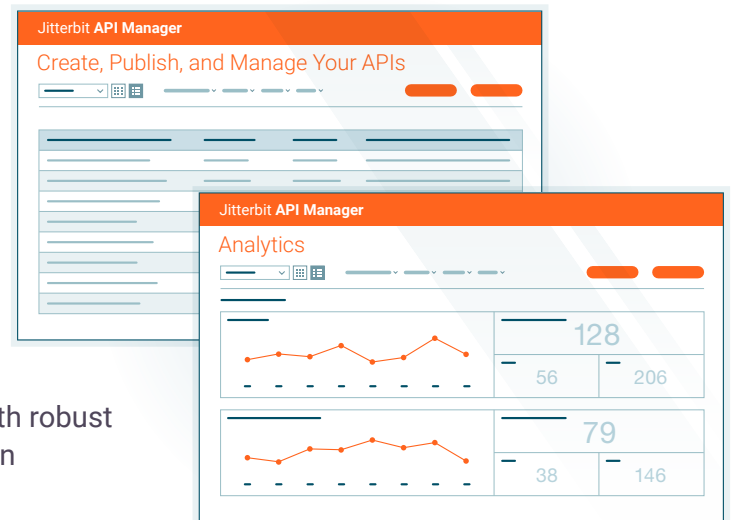

Create, Control and Consume APIs

Jitterbit API Manager revolutionizes API lifecycle management, orchestrating automation. It streamlines API creation, control and consumption through a modern, user-friendly interface, allowing IT professionals and business users to transform integrations into APIs. This enables real-time workflow orchestration and automation with minimal effort. The centralized management console provides comprehensive control, robust security and complete visibility across every stage of the API lifecycle, making it easier than ever to manage and secure APIs efficiently.

With Jitterbit API Manager, you can:

- › **CREATE**, document and publish APIs quickly with our intuitive user interface
- › **CONTROL** and secure APIs using built-in controls and policies
- › **CONSUME** APIs through a portal that simplifies API discovery and testing
- › **MANAGE** the complete API lifecycle from any device with robust security controls and comprehensive user authentication

Jitterbit API Manager allows users to quickly integrate APIs from existing systems with a simple yet powerful interface. With just a few clicks, users can create new APIs that are functional and accessible for developers, facilitating the development of applications for internal users, partners and customers.

Jitterbit API Manager provides many benefits to improve your API landscape:

- › **Unified Platform:** Use APIs in applications built with our App Builder or within your existing systems.
- › **Ease of Use:** Create APIs from any integration using a simple, intuitive interface with built-in security and governance.
- › **Faster Time to Value:** Quickly transform iPaaS integrations into reusable APIs to drive real-time workflow automation.
- › **AI Infusion:** Generative AI-powered assistant accelerates development, management and maintenance of APIs.

Key Features of Jitterbit API Manager

Create APIs Rapidly

- › Create and publish integrations and workflows as APIs with just a few clicks
- › Expose external APIs as proxies for centralized management via Harmony
- › Support both standard HTTP methods and custom-defined methods
- › Easily migrate APIs across different environments
- › Extend API capabilities effortlessly through multiple paths and services

Control and Secure APIs

- › Secure and manage API access using multiple authentication methods, including Basic Auth, API Keys and OAuth 2.0
- › Enhance security with trusted IP ranges and domain restrictions
- › Prevent resource overloads and mitigate security threats with API-level rate limiting
- › Optimize traffic control and security by deploying private API gateways

Intuitive User Experience

- › User-friendly interface enables non-technical users to create and publish APIs easily with guided assistance
- › Create iPaaS integrations as APIs directly from Integration Studio in one-click
- › Effortlessly switch between APIM and Integration Studio to interactively build APIs for iPaaS integrations

Consume APIs Easily

- › Expose integrations as APIs with an easy-to-use wizard
- › Facilitate consumption of APIs by internal and external developer communities
- › Provide customized API branding, such as logo, name and contact info
- › Productize APIs with terms and conditions for use

Manage and Monitor APIs

- › Monitor API performance and consumption trends through an intuitive visual dashboard
- › Easily access API consumption details by API names/URLs, time periods, call status and more
- › Gain deeper insights into API usage based on response times, IP addresses and HTTP response codes
- › Diagnose issues with advanced operational and debug logs for enhanced API call tracing

OpenAPI/Swagger Documentation

- › Auto-generate and publish OpenAPI/Swagger documentation for APIs with a single click
- › Enhance API documentation using the OpenAPI/Swagger editor
- › Interactively test and validate APIs directly within the OpenAPI/Swagger documentation before publishing to the Developer Portal
