

# API Manager

*API Management through  
Clicks not Code*

## Enable Rapid Innovation

The API economy is changing the way businesses operate. APIs are needed for everything from introducing new products and channels to improving operational efficiency and competitive differentiation.

API creation and management are essential as companies look to compose new solutions. APIs must be documented and exposed to developers in ways that are easy to understand and consume.

Companies also need a secure platform on which to execute these APIs so the new applications are immediately trusted by users.

With the Jitterbit API integration platform, businesses can create, run, secure, publish, manage and analyze APIs and microservices no matter where your APIs are hosted, or what technologies they run on.

Jitterbit's simple, yet powerful user interface allows users to integrate APIs from existing systems quickly and easily with just a few simple clicks. Users can create new APIs that are easy to use, work flawlessly and can be used by developers to compose innovative applications that delight internal users, partners and customers.

Because our API and integration products run on a single platform, your APIs can access any application or data source anywhere, any time.

## KEY BENEFITS

- ✓ Quickly create APIs that reuse existing systems and data.
- ✓ Enable your business to monetize data, forge profitable partnerships and open new avenues for innovation and growth.
- ✓ Access data from a wide range of applications and systems to create new digital processes.
- ✓ Enable API consumers to securely interact with published APIs via OpenAPI specification, to evaluate the behavior of the API prior to composing an application.
- ✓ Infuse artificial intelligence through APIs to transform your business processes.
- ✓ Scale on-demand to meet new business requirements using a scalable platform.

## Key Features

### Rapid API Creation & Management

- Create and publish Custom APIs and OData Services in just *four* simple steps.
- Support all HTTP methods, including Custom method and response types.
- View API URL entitlement and consumption.
- Import APIs across environments.
- Maintain multiple API versions.

### Enhanced API Analytics

- Monitor API Performance and Consumption trends through a dashboard.
- Easily filter API analytics data based on API URL/name, user profile and status codes.
- Filter usage by various time periods or monitor consumption, such as by IP address, by response times, HTTP response codes, etc.
- Enhanced API Operational & Debug logs for easy issue diagnosis.
- Search and filter logs for faster debugging.

### Scalable, Reliable and Secure Platform

- Support auto-scaling based on predefined or dynamic thresholds.
- Secure and govern APIs through various authentication types including Basic, OAuth 2.0 with domain restrictions.
- Support user-level API rate limiting.
- Control access to APIs via IP-white listing.

### Developer Portal

- Facilitate consumption of APIs by internal and external developer communities.
- Gain security and access controls through the API Management & Administration portal.
- Ability to invite API consumers.
- Provide customized branding, such as logo, name and contact info.
- Include terms and condition and API productization.

### OpenAPI/Swagger Documentation

- Auto-generate OpenAPI/Swagger documentation from an iPaaS operation.
- Use OpenAPI/Swagger editor to enhance documentation of an API.
- Access to interactive OpenAPI/Swagger documentation for APIs and ability to expose APIs in the Developer Portal.

### Intuitive User Experience

- Simple and intuitive user experience to create and manage APIs.
- Import/export APIs easily between environments (e.g., development to staging to production) with just a few clicks.
