

Jitterbit EDI

Build, manage and monitor the exchange of business documents

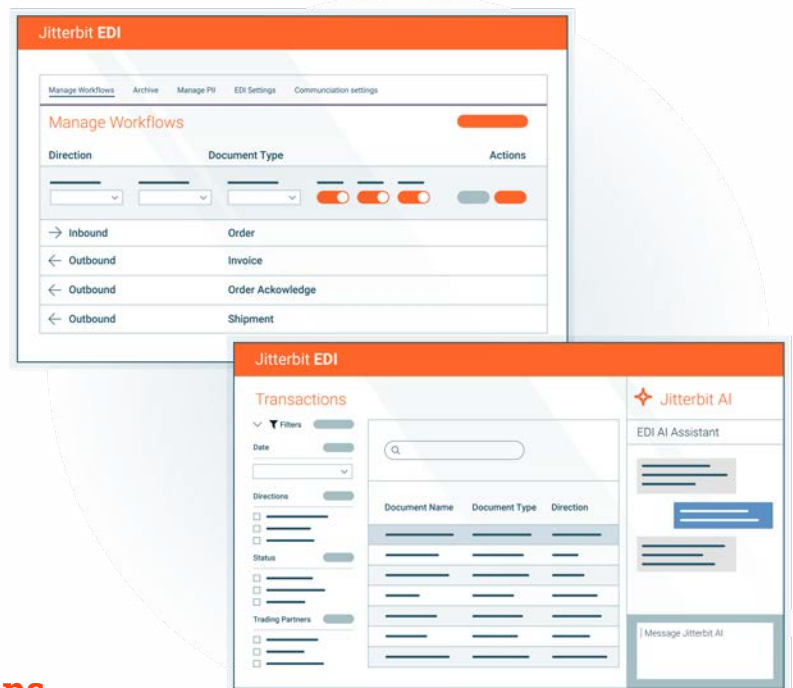

Jitterbit EDI lets you effortlessly set up, test and monitor EDI trading partners and transactions. The Jitterbit EDI AI Assistant makes EDI even easier, giving even novice and nontechnical users complete access to trading partner settings and configurations using conversational language prompts. With a library of 1,000+ pre-built trading partner connections, Jitterbit EDI lets you set up new trading partners and automate your B2B workflows within minutes.

And because Jitterbit EDI and the AI Assistant are fully integrated with Jitterbit iPaaS, you can automate and orchestrate integrations between EDI, ERP systems and other applications – eliminating data silos, enhancing data consistency, improving trading partner communications and boosting overall operational efficiency.

With Jitterbit EDI and EDI AI Assistant, you can:

- › **SET UP**, test, manage and monitor trading partners
- › **CONTROL** and reprocess transactions without accessing the integration layer
- › **AUTOMATE** data transfers from EDI into your ERP system and other applications
- › **ORCHESTRATE** the B2B transaction lifecycle seamlessly, ensuring efficient and accurate exchange of documents

Jitterbit EDI enables businesses to accelerate operational efficiency, orchestrate process automation and facilitate trading partner communications.

- › **Unified Platform:** Build, manage and monitor B2B transactions, seamlessly integrating with back-end systems and applications like ERP and ecommerce.
- › **AI Infusion:** Generative AI-powered assistant accelerates development, management and maintenance.
- › **Security First:** Adhere to stringent standards, compliances and industry regulations. Prevent unauthorized access through customizable access controls and encryption of data in-transit and at-rest.
- › **Ease of Use:** Simplify EDI setup with a modern UI coupled with a pre-built library of over a thousand trading partners, enabling you to rapidly launch and manage EDI transactions.
- › **Faster Time to Value:** Rapidly deploy and test your EDI transaction workflows across your partners.
- › **Predictable Pricing:** Pay by trading partner, not message—helping you avoid surprise spikes in billing.

Key Features of Jitterbit EDI

EDI AI Assistant

- › **Self-Service Configuration Management:** Instantly retrieve or update complex connection details without opening a support ticket or waiting for a technical administrator.
- › **Rapid Troubleshooting & Root Cause Analysis:** Identify and resolve transaction failures in seconds by filtering messages across trading partners via specific keywords or error types.
- › **Data-Driven Decision Making:** Quickly pull summary insights with searchable analytics based on date, partner and document type — allowing you to monitor supply chain health and partner performance in real time.

EDI Analytics

- › Transform complex EDI data into intuitive, visual reports with built-in filtering by date, partner, and document type for clearer business insights.
- › Benchmark trading partner efficiency to identify bottlenecks, improve collaboration, and streamline supply chain processes.
- › Leverage historical data and seasonal trend analysis to identify growth opportunities, support long-term strategies, and assist in capacity planning.

EDI Administration

- › Add, create and edit trading partners without the need to submit a request
- › Create workflows that use EDI directly instead of relying on maps to make the process more streamlined
- › Remove the need for additional software or service costs by including VAN, AS2, SFTP and FTP connections
- › Take advantage of transparent, per-trading-partner pricing

Transaction Management

- › Allow non-technical users to effortlessly monitor and manage their EDI transactions
- › Easily locate any EDI transaction with our advanced search option
- › Gain full visibility by allowing the downloading, printing and copying of both the native and transformed EDI transactions

Intuitive User Experience

- › Enable non-technical users to do more with a solution that is decoupled from the integration layer
- › Leverage a modern UI for EDI management not found in other solutions

Messaging and Logging Transactions

- › Message logging at the transaction level helps during testing cycles
- › Identify issues related to communication loss and transaction processing easily

Transaction Archiving

- › Manage the frequency of transaction archiving for each trading partner, and let the system automate the process for you
- › Provide an easy way for users to locate and restore archived transactions
- › Leverage an unlimited retention of archived transactions to better meet compliance

Trading Partner Communications

- › Secure data during transmissions to protect sensitive information and meet industry guidelines
- › Achieve data exchange consistency and reliability with automation to minimize errors and delays when responding to trading partners
- › Orchestrate seamless integration and data synchronization between systems to enhance the efficiency and accuracy of trading partner communications

Security and PII

- › Trading partners segregated by environment
- › Transaction encryption at rest and during transmission
- › PII masking on all transaction data
- › Permanently delete documents
- › Remove all content from selected documents
