NetSuite-Magento Invoice-to-Fulfillment Process Template

Jitterbit

Business Problems Solved:

- Connect ERP and e-commerce systems to share data and automate processes
- Integrate and synchronize data and processes quickly and easily between systems
- Maintain a single source of truth for your data

Process Template Package:

- Two endpoints: NetSuite ERP, Magento Commerce
- Five pre-built integrations
- Delivery services provided by Jitterbit to deploy the Process Template (optional)

Value to Customers:

1. Packaged solution speeds integration and reduces technical resource requirements
2. Standard objects minimize the need for additional customization
3. Pre-built workflows automate data synchronization between common objects such as Customer, Product, Invoice, and Order
4. Integrated processes eliminate manual data entry, data exports, costly delays
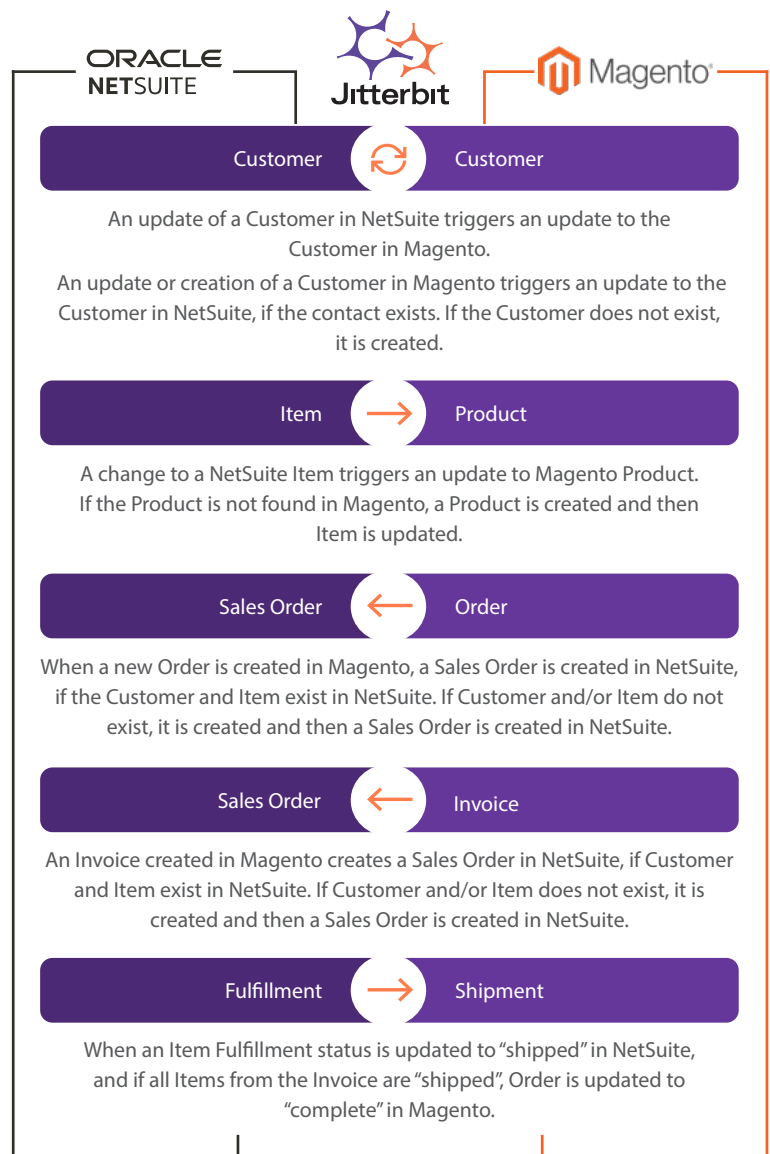

Business Benefits:

- **Drive greater efficiencies** in sales order fulfillment with a pre-built template that reduces custom coding and speeds automatic connections to commonly used objects, fields, and processes
- **Transform operations** with streamlined communications and data integration across business processes
- **Meet rising customer expectations** for a seamless customer experience with quick, cost-effective integration that synchronizes data and processes between workflows

Introduction

Build a connected customer experience with Jitterbit's NetSuite-Magento Invoice-to-Fulfillment Template. A packaged solution of pre-built integrations connects data and processes between applications right out of the box, significantly reducing integration efforts. Synchronize customer, product, shipment, and fulfillment status between systems, and automatically create a sales order when an invoice is created.

Connect your ERP and e-commerce systems quickly and easily with reusable integrations that speed implementation and streamline business processes.

This template includes pre-built integrations that connect the following objects and fields between NetSuite ERP and Magento Commerce:

ORACLE NETSUITE — Jitterbit — Magento

Customer ⟳ **Customer**

An update of a Customer in NetSuite triggers an update to the Customer in Magento.
An update or creation of a Customer in Magento triggers an update to the Customer in NetSuite, if the contact exists. If the Customer does not exist, it is created.

Item → **Product**

A change to a NetSuite Item triggers an update to Magento Product. If the Product is not found in Magento, a Product is created and then Item is updated.

Sales Order ← **Order**

When a new Order is created in Magento, a Sales Order is created in NetSuite, if the Customer and Item exist in NetSuite. If Customer and/or Item do not exist, it is created and then a Sales Order is created in NetSuite.

Sales Order ← **Invoice**

An Invoice created in Magento creates a Sales Order in NetSuite, if Customer and Item exist in NetSuite. If Customer and/or Item does not exist, it is created and then a Sales Order is created in NetSuite.

Fulfillment → **Shipment**

When an Item Fulfillment status is updated to "shipped" in NetSuite, and if all Items from the Invoice are "shipped", Order is updated to "complete" in Magento.

The *API Lifecycle* of a Customer

Invoice-to-Fulfillment

To create a seamless e-commerce experience, you need to connect your storefront to your back-office, automate business processes, and get real-time visibility into your operations. The NetSuite-Magento Invoice to Fulfillment Process Template syncs Customer, Order, Product, Invoice and Fulfillment data, eliminating manual data entry and provides a single source of truth for your data. When a new order is created in Magento, a sales order is automatically created in NetSuite and fulfillment status is updated when parts are shipped. With Jitterbit's NetSuite-Magento Invoice-to-Fulfillment Process Template you can use pre-built integrations to jumpstart integrations and accelerate your time to market.

About Jitterbit

Jitterbit, the API transformation company, makes it quicker and easier for businesses to exploit data from any source, empowering them to rapidly innovate and make faster, more effective decisions.
