

Harmony EDI

Self-managed, fully integrated solution with built-in trading partner connections.

In the rapidly expanding commerce and retail market, businesses are capitalizing on the growth by embracing marketplaces like Amazon, Walmart, Costco, and Home Depot. Businesses leverage these marketplaces to boost sales, increase brand awareness, and maintain a competitive edge. To establish a presence on these marketplaces, businesses must leverage Electronic Data Interchange (EDI) to meet the marketplace's transaction requirements and seamlessly exchange electronic documents such as purchase orders, shipping information, invoices, and more.

When businesses decide to implement EDI, they often find that solution providers offer it as a stand alone service with heavy reliance on the provider to set up, test, and configure trading partners and EDI within their network.

In today's interconnected business landscape, there is a pressing need for a reliable, self managed, fully integrated EDI solution with established trading partners connections and prebuilt integrations to ERP, CRM, and third-party systems. It's essential for businesses to have visibility into document acknowledgment and verification to ensure a seamless coordination of deliveries and schedules with their trading partners. Our EDI solution, fully integrated into our Harmony iPaaS solution, empowers businesses with the necessary oversight to maintain compliance with their trading partners and automate EDI processes.

Experience the Power of Jitterbit's Harmony EDI:

Seamlessly Integrated, Cloud-based solution for effortless setup, testing, and monitoring of EDI Trading Partners and Transactions.

Jitterbit's EDI allows customers full and complete access to trading partner settings and configurations including the ability to:

- ✓ Facilitate the entire transaction lifecycle including: Acknowledgments, Status, Reprocessing, and Related Documents
